Exercise 04: Git Repository Configuration & Collaboration Report

- **Course:** Computational Thinking (CS252 - Class 25A01)
- **Student ID:** 25125048
- **Student Name:** Lý Trần Thái
- **Personal GitHub Handle:** @LyTranThai
- **Submission Date:** October 17, 2026

---

1. Task 1: Personal Repository Setup

In accordance with course policies, a private Git repository has been established on GitHub for managing all individual weekly lab assignments, exercises, and documentation for the Computational Thinking course.

Personal Repository Details

- **Platform:** GitHub
- **Visibility:** Private
- **Repository URL:** https://github.com/LyTranThai/Computational-Thinking
- **Designated Git Username:** `LyTranThai`
- **Associated Email:** `25125048@student.hcmus.edu.vn` (and `145539003+LyTranThai@users.noreply.github.com`)

Collaborator Access Verification

The course instructor and Teaching Assistant (TA) have been added as collaborators with read/write access to this private repository to facilitate continuous progress monitoring and grading:

- [x] Instructor added as collaborator
- [x] Teaching Assistant (TA) added as collaborator
- [x] Repository access verified

> **Commitment:** I confirm that my GitHub username (`LyTranThai`) will remain fixed and unchanged throughout the entire semester for all personal and group course submissions.

---

2. Task 2: Group Repository Setup & Team Roster

A dedicated private repository has been configured by the team on GitHub to host the source code, architecture specifications, sprint documentation, and deliverables for the CS252 Final Project.

Group Repository Details

- **Platform:** GitHub
- **Visibility:** Private
- **Repository Name:** `cs252-final-project`
- **Repository URL:** https://github.com/callmelucian/cs252-final-project

- **Primary Owner / Administrator:** Nguyễn Tấn Minh (@callmelucian)

Team Member Roster & Git Identifiers

All seven team members have been added to the private repository with appropriate contributor permissions. The permanent Git usernames for all members are documented below:

Student ID	Full Name	GitHub Username	Profile Link	Assigned Project Role
25125027	Nguyễn Tấn Minh	`callmelucian`	github.com/callmelucian	Team Leader
25125084	Trần Gia Huy	`FubuGold`	github.com/FubuGold	Main System Design
25125050	Bùi Đỗ Thiên Ân	`Gasmask-Chan`	github.com/Gasmask-Chan	Algorithm & Logic Developer
25125014	Nguyễn Đức Huy	`SpheraXX`	github.com/SpheraXX	Front-end Developer
25125048	Lý Trần Thái	`LyTranThai`	github.com/LyTranThai	Core Developer & Data Integration
25125056	Trần Đăng Khoa	`trankhoa8581`	github.com/trankhoa8581	Back-end Developer
23125054	Ngô Tấn Đạt	`diamondzone1`	github.com/diamondzone1	Security & Data Engineer

Group Collaborator Access Checklist

- ☑ All 7 team members added to repository permissions
- ☑ Course Instructor invited as repository collaborator
- ☑ Course Teaching Assistant invited as repository collaborator
- ☑ Branch protection rule enabled on `main` branch (requires code review approval)

---

3. Git Environment & Local Configuration

To guarantee traceable and consistent commit history across all machines, the local Git environment has been verified:

```
# Verify Git global user configuration
git config --global user.name "LyTranThai"
git config --global user.email "145539003+LyTranThai@users.noreply.github.com"

# Check active remote connection
git remote -v
# Output:
```

```
# origin  https://github.com/LyTranThai/Computational-Thinking (fetch)
# origin  https://github.com/LyTranThai/Computational-Thinking (push)
```

Git Workflow Standards

In alignment with `Exercise 02 (Team Contract)`:

1. **Branching Model:** Features are developed on dedicated branches (`feature/<name>`) branched from `dev`, then merged via Pull Request with peer review.
2. **Commit Conventions:** Structured messages using standardized prefixes (`feat:`, `fix:`, `docs:`, `refactor:`, `test:`).
3. **Weekly Commit Audits:** Commit logs are systematically generated and verified prior to each weekly submission.
